

CEMENT REMOVER

Product Description

Cement Remover is a specialized solution designed to effectively soften and dissolve and remove cement residues from various surfaces. It harnesses the dissolving power of Sulphamic acid combined with surfactants to penetrate and loosen tough cement deposits, facilitating easy removal without causing damage to the surface.

Applications:

Ideal for removing cement residues from surfaces such as tiles, bricks, concrete, stone, and metal. Suitable for use on colour bond and powder coated items. Suitable for use in construction, renovation, and maintenance projects.

Physical Properties

Green mild acidic solution
Low pH mild odour
Safe to use with bleaches

Chemical Properties

Water based
Sulphamic acid active
Penetrating organic solvents and wetting surfactants

Environment

This product is not expected to bio-accumulate and is readily bio-degradable.

Directions for Use:

1. Apply the Cement Remover directly to the affected area using a brush or spray.
2. Allow the solution to dwell on the cement residue for several minutes to penetrate.
3. Gently scrub the surface with a brush or sponge to loosen the cement deposits.
4. Rinse the surface thoroughly with water to remove the dissolved cement and residue.
5. For stubborn deposits, repeat the process as necessary.

Coverage

~ 50 to 100m²

Precautions:

Use in a well-ventilated area.
Wear gloves and eye protection when handling the product.
Avoid prolonged skin contact. In case of contact, rinse thoroughly with water.
Keep out of reach of children.
Test the product on a small, inconspicuous area before full-scale application.

Packaging:

Available in 5lt and 20 lt containers.

Disclaimer: The information provided in this technical data sheet is based on our current knowledge and experience. However, it is the user's responsibility to ensure the suitability and safety of the product for their specific application. We recommend conducting compatibility and performance tests before full-scale application.
